PROFILE

Software Engineer with 4 years of experience in software development and a Master's in Computer Science. Skilled in Python, JavaScript, and AWS, with expertise in designing RESTful APIs, developing reusable UI components, optimising application performance, and building intelligent automation systems powered by modern AI technologies. Strong track record of delivering end-to-end features in Agile teams using modern CI/CD.

SKILLS

Backend: Python, Flask, Node.js, REST APIs, Microservices, SQL, PostgreSQL, NoSQL, MongoDB, Redis, Kafka
Frontend: JavaScript, TypeScript, React.js, Redux, Next.js, HTML, CSS, Tailwind CSS, UI/UX fundamentals
Cloud & Infra: AWS (EC2, S3, IAM, Lambda, CodeCommit), Serverless Architecture, Docker, Kubernetes, Git, CI/CD, Jenkins, Linux, NGINX
AI: GenAI, Prompt Engineering, LLM APIs (OpenAI), LiteLLM, Agentic AI, RAG, Vector Databases, MCP, AI-Assisted Development (Claude, Codex)

WORK EXPERIENCE

Ejyle | Client: ProTec General Insurance Limited — Bangalore, IN
Software Developer — Sep 2026 – Present

- Led end-to-end development of a motor insurance platform using **React Native, TypeScript,** and **Node.js,** delivering a complete digital purchase journey from prototype to policy issuance in five weeks.
- Integrated 15+ RESTful APIs across distributed microservices, backend-for-frontend (**BFF**), and third-party systems, enabling seamless quotation, policy management, underwriting, and payment workflows.
- Developed **payment workflows** integrating third-party payment APIs (PayU), asynchronous status polling, and automated policy issuance.
- Implemented secure **KYC and identity verification workflows**, incorporating customer data validation, sensitive data handling, and multi-nominee support across frontend and backend services.
- Delivered 40+ pull requests across six repositories, using Claude Code for AI-assisted development, **AWS (ECS, CodeCommit), Docker, Playwright,** and **Postman** for debugging, testing, and cloud-based application delivery.

Open Science Tools — Nottingham, UK
Software Engineer — Jul 2024 – Apr 2026

- Designed and maintained **10+ REST APIs** using **Python, Flask,** and Gunicorn to support user onboarding, account management, and internal platform workflows across a production platform serving **50,000+ users**.
- **Led end-to-end deployment** of a secure, self-hosted Pavlovia instance for a client, managing **infrastructure**, GitLab installation, **SSL/TLS configuration**, server hardening, and ongoing production support.
- Automated GitLab domain whitelist updates using a **Python** script and GitLab **CI/CD** environment variables, ensuring consistent, error-free updates without manual intervention and **reducing configuration effort by 80%.**
- Owned and built an access management portal, integrating **Stripe Payment Intents** and controlled account creation via the **GitLab API**, reducing admin overhead during onboarding workflows by **60%.**
- Implemented unit and integration tests using **Pytest**, and automated **Playwright**-based end-to-end tests for Pavlovia.
- Integrated Google and Microsoft as OAuth 2.0 providers to enable secure single sign-on (**SSO**) for Pavlovia users.

Mphasis — Bangalore, IN
Associate Solution Developer — Jul 2021 – Dec 2022

- **Led the end-to-end development of 3 Web3.0 applications** using the MERN stack (MongoDB, Express.js, **React/Next.js, Node.js**), building decentralised solutions such as an NFT Marketplace.
- Developed **React** and **Redux** frontend workflows for user onboarding, marketplace listings and auctions, integrating frontend components with Node.js REST APIs. Designed and optimised RESTful APIs using **Node.js**, improving response times by 50%.
- Collaborated on **5+ proof-of-concepts**, integrating blockchain features and deploying Docker containers on **AWS** through **CI/CD pipelines**, with unit and integration testing using **Jest**.
- Collaborated within the Blockchain Centre of Excellence team, demonstrating expertise in core Web3.0 development technologies.

Amazon — Bangalore, IN
Transaction Risk Investigator — Nov 2020 – Jul 2021

- Performed large-scale transaction risk analysis using **SQL** and internal fraud detection platforms, identifying behavioural anomalies and compliance risks across 500+ customer accounts.

EDUCATION

University of Strathclyde — Glasgow, UK
Master of Science in Advanced Computer Science — Jan 2023 – Jan 2024
Visvesvaraya Technological University — Bangalore, IN
Bachelor of Engineering (Information Science) — Jul 2016 – Jul 2020

PROJECTS

Job Search Copilot | *Python, LiteLLM, OpenAI API, Playwright, Supabase, GitHub Actions* — Jul 2026 – Present
Building an AI-powered job search copilot that automates job discovery, resume tailoring, outreach drafting and application tracking using LLMs. Designed a provider-agnostic AI architecture using LiteLLM, GitHub Actions, Supabase and Playwright for scalable agent workflows.
ReframeAI | *Python, Flask, OpenRouter API, HTML, CSS* — May 2026
Developed a full-stack AI-powered reflection application that analyses user input for cognitive distortions and generates personalised CBT reframes.
GlucoCare| *React.js, Node.js, Express.js, MongoDB, JWT* — Jul 2023 – Aug 2023
Developed a full-stack diabetes platform with health tracking, personalised recommendations, discussion forums, and secure JWT authentication.
University Distributed Information Platform | *MySQL, XML, SPARQL, XQuery, Protégé* — Feb 2023 – Apr 2023
